

LEGO® Based Therapy

Lego®-based therapy is a social development programme for children with autism spectrum disorders or related social communication difficulties. Children work together to build Lego® models through structured play and have the opportunity to develop social skills such as turn taking, collaboration and social communication. It is also an effective intervention to help develop speech and language skills.

LEGO®-Based Therapy Training and Resource Packs

We offer onsite training for schools which includes example sessions with pupils. We also offer LEGO Resource packs so schools can implement the intervention straight away after training and include everything required for a 6 week intervention for EY/KS1/KS2/KS3.

**Trained by Gina Gomez who Pioneered
LEGO®-Based Therapy in the UK.**

LEGO®-based Therapy packs for parents. Ask us for more details.

School Workshops

We offer interactive, imaginative LEGO® workshops for children from Nursery to Y6 using a HUGE amount of LEGO® as a stimulus. All workshops are created and delivered by a qualified teacher in order to cover specific areas of the curriculum in a structured, exciting and engaging environment. Our workshops are often used to stimulate a piece of extended writing, as an introduction or climax to a topic, to help consolidate skills, for special events or for pure fun!
